# Progressive Outline Demo

*Show a progressive-outline use case*

David | 2026-01-10

# Sommaire

Welcome to Classical Mechanics. This is the first slide.

# Newton's Laws

Newton's laws are the foundation.

- First law: Inertia
- Second law: F=ma

**This is a titleless slide.**

It was generated with `#slide(none)[...]`. Even though we are still in the Newton's Laws subsubsection, the header title has disappeared.

# Lagrangian Mechanics

A more abstract formulation using energy.

Maxwell's equations rule here.

Things get weird near the speed of light.

# Special Relativity

- Time dilation
- Length contraction
- $E = mc^2$

# General Relativity

Gravity is curvature of spacetime.

Probabilities and wavefunctions.

This section has no subsections.
