

1 Hello Typst!

This is the first slide in presentate

1 Hello Typst!

This is the first slide in presentate

You can see this time the heading has numbered!

1 Hello Typst!

This is the first slide in presentate

You can see this time the heading has numbered!

By default, page, equation figure, quote, and heading counters are frozen.

1 Hello Typst!

This is the first slide in presentate

You can see this time the heading has numbered!

By default, page, equation figure, quote, and heading counters are frozen. By the way, you can change the layout by alter function

1.1 math.equation example

For example, the following equation:

1.1 math.equation example

For example, the following equation:

$$E = mc^2 \tag{1}$$

$$a^2 + b^2 = c^2 \tag{2}$$

1.1 math.equation example

For example, the following equation:

$$E = mc^2 \tag{1}$$

$$a^2 + b^2 = c^2 \tag{2}$$

It is shown with the same number!

1.1 math.equation example

For example, the following equation:

$$E = mc^2 \tag{1}$$

$$a^2 + b^2 = c^2 \tag{2}$$

It is shown with the same number! However, it is still not referencable. Typst will complain you about the labeled content occuring multiple times in the document.

1.1 `math.equation` example

For example, the following equation:

$$E = mc^2 \tag{1}$$

$$a^2 + b^2 = c^2 \tag{2}$$

It is shown with the same number! However, it is still not referencable. Typst will complain you about the labeled content occuring multiple times in the document. So I hacked with `self.subslide`:

Equation 1 is from Eistein.

Equation 2 is from Pythagoras.

1.2 More equations

$$KE = \frac{1}{2}mv^2 \quad (3)$$

1.2 More equations

$$KE = \frac{1}{2}mv^2 \tag{3}$$

As mentioned in Section 1.1, the equation numbering is working!
