5 Conclusion

5.1 Getting Started •

The **Miniframes** theme provides a navigation bar at the top or bottom of every slide.

It is inspired by classic LaTeX Beamer themes (like **Frankfurt** or **Berlin**) where small dots represent the progress within each section.

2.4 Navigation Position

3 Navigation Options

3.1 Compact vs Grid

3.2 Heading Numbering

3.3 Marker Customization

3.4 Advanced Layout

4 Animations

4.1 Dots & Pauses

5 Conclusion

5.1 Getting Started

- **Automatic Tracking:** Dots are generated and highlighted based on your headings.
- **Stable Layout:** The header and footer are fixed to prevent content from jumping.
- **Transition Slides:** Automated outlines appear between sections and subsections.
- **Highly Customizable:** Control colors, shapes, spacing, and positioning.

Slide Zones

The theme splits every slide into three vertical zones:

- 1. Navigation Zone:** Contains the miniframes bar.
- 2. Content Zone:** Contains the slide title and body.
- 3. Metadata Zone:** Contains the footer (author, title, page numbering).

2 Layout & Zones

2.1 The 3-Zone System

2.2 Slide Titles

2.3 Font Configuration

2.4 Navigation Position

- 3.3 Marker Customization •
- 3.4 Advanced Layout •

4 Animations

- 4.1 Dots & Pauses •

5 Conclusion

- 5.1 Getting Started •

Optional Titles

Slide titles are now optional and strictly manual.

Unlike previous versions, the theme no longer automatically uses the subsection title as the slide title.

- `#slide[...]`: No title block shown.
- `#slide("My Title")[...]`: Displays “My Title” at the top.

2 Layout & Zones

2.1 The 3-Zone System

2.2 Slide Titles

2.3 Font Configuration

2.4 Navigation Position

1 Introduction

- 2.2 Slide Titles •
- 2.3 Font Configuration •
- 2.4 Navigation Position •

3 Navigation Options

- 3.1 Compact vs Grid •
- 3.2 Heading Numbering •
- 3.3 Marker Customization •
- 3.4 Advanced Layout •

4 Animations

- 4.1 Dots & Pauses •

5 Conclusion

- 5.1 Getting Started •

The theme supports global font customization:

```
text-font: "Roboto",  
text-size: 22pt
```

The navigation bar (dots), titles, and footer will scale proportionally to the chosen text size.

2 Layout & Zones

2.1 The 3-Zone System

2.2 Slide Titles

2.3 Font Configuration

2.4 Navigation Position

2 Layout & Zones

- 2.1 The 3-Zone System •
- 2.2 Slide Titles •
- 2.3 Font Configuration •
- 2.4 Navigation Position •

3 Navigation Options

- 3.1 Compact vs Grid •
- 3.2 Heading Numbering •
- 3.3 Marker Customization •
- 3.4 Advanced Layout •

4 Animations

- 4.1 Dots & Pauses •

5 Conclusion

- 5.1 Getting Started •

By default, the bar is at the top. You can move it to the bottom:

```
navigation: (
  position: "bottom"
)
```

In this case, it will be placed just below the footer.

3 Navigation Options

- 3.1 Compact vs Grid
- 3.2 Heading Numbering
- 3.3 Marker Customization
- 3.4 Advanced Layout

3.3 Marker Customization •

3.4 Advanced Layout •

4 Animations

4.1 Dots & Pauses •

5 Conclusion

5.1 Getting Started •

There are two main styles for the navigation bar:

- **compact**: All dots of a section are aligned on a single line.
- **grid**: Each subsection gets its own line (current mode).

```
navigation: (
  style: "grid",
  show-subsection-titles: true
)
```

3 Navigation Options

3.1 Compact vs Grid

3.2 Heading Numbering

3.3 Marker Customization

3.4 Advanced Layout

- 3.3 Marker Customization •
- 3.4 Advanced Layout •

4 Animations

- 4.1 Dots & Pauses •

5 Conclusion

- 5.1 Getting Started •

You can toggle section numbering:

`show-heading-numbering: false`

This affects the slide titles, the navigation outlines, and the transition slides.

3 Navigation Options

- 3.1 Compact vs Grid
- 3.2 Heading Numbering
- 3.3 Marker Customization
- 3.4 Advanced Layout

3.4 Advanced Layout

4 Animations

4.1 Dots & Pauses

5 Conclusion

5.1 Getting Started

You can change the shape and size of the progress dots:

- marker-shape: "circle" or "square".
- marker-size: The diameter/width of the marker.

The colors are derived from the theme's main color but can be overridden.

3 Navigation Options

- 3.1 Compact vs Grid
- 3.2 Heading Numbering
- 3.3 Marker Customization
- 3.4 Advanced Layout

3.4 Navigation Position

4 Animations

4.1 Dots & Pauses

5 Conclusion

5.1 Getting Started

You can further customize the block containing the navigation bar:

- **Width:** Reduce the bar's width (e.g., `width: 80%`).
- **Radius:** Round the corners of the bar (e.g., `radius: 10pt`).
- **Alignment:** Align the entire block (left, center, right).

```
navigation: (
    width: 80%,
    radius: 10pt,
    align-mode: "center"
)
```

4 Animations

- 4.1 Dots & Pauses •

5 Conclusion

- 5.1 Getting Started •

Stable Navigation

Even when using animations like pause, the navigation bar remains stable.

Note that a slide with pauses only counts as **one** dot in the navigation bar.

5 Conclusion

5.1 Getting Started

Stable Navigation

Even when using animations like pause, the navigation bar remains stable.

Note that a slide with pauses only counts as **one** dot in the navigation bar. This ensures that the bar reflects the **logical** progress of your talk, not the number of click-steps.

Summary

Simply import the theme and start using standard headings:

- = for Sections (H1)
- == for Subsections (H2)
- #slide("Title") [...] for your content.
